

**Amendments to the Specification:**

Please replace the paragraph which begins at page 3, line 25 with the following amended paragraph:

Of significance to the invention is that the telephony server 110 is equipped with the feature whereby a call ~~original~~ originally directed to a subscriber's number is rerouted to an alternative location number. These systems are well known in the art and permit the user to store alternative numbers where he is most often contacted (i.e., their desk, home, mobile phone, etc.). These numbers can be readily changed and/or prioritized by various interfaces with the user. Once a call is rerouted to the called party cell phone 104, the server 110 has access to both inbound 114 and outbound 116 legs of the call.
